- The library will decode the VIN of the vehicle into information about the vehicle's year of manufacture. - In most vehicles the VIN will start with a prefix, following by three letters, four numbers, a space, three numbers, and a suffix. - The prefix is used to identify the manufacturer of the vehicle, the three letters identify the model and/or series number and the three numbers identify the sequence number of the vehicle. - In the USA there are 15 different manufacturer codes. Each manufacturer can be identified by a two digit code. The first two digits of the VIN are the manufacturer code. - Each manufacturer can be identified by three to six models. - Each manufacturer can be identified by the length of the prefix. - Each manufacturer can be identified by the length of the suffix. - Each manufacturer can be identified by the length of the model code. - Each manufacturer can be identified by the length of the series code. - Each manufacturer can be identified by the length of the serial code. - The VIN is a unique string of 7 alphanumeric characters, the letters are uppercase and the numbers are in decimal. - The letters of the VIN can be any of the following: - a-z - A-Z - 0-9 - The number of letters are dictated by the manufacturer, the numbers are dictated by the manufacturer and the code. - The following is a list of manufacturers with their numbers and how the VIN's characters can be distributed: - All the letters that are above can be used, with the exception of the letter Q. The letter Q is only used in the model code. - The same rules apply to the serial number. - The first three characters are used to identify the manufacturer. - The first four digits are used to identify the model and/or series number. - The last two digits are used to identify the series. - The year of manufacture can be identified by the last two characters. - The country code can be identified by the last two characters. - The vehicle's U.S. zip code can be identified by the last three characters. - The number of characters that are left after the prefix, model code, series code, country code and zip code can be used to identify the vehicle's serial number. The following is the list of countries that have a VIN: - Afghanistan - Albania 1d6a3396d6

I have been using asymptotic notation in a practical way. I have seen it being used for the efficiency analysis of a program/algorithm. Also, it is being used to compare the runtime of a recursive function to the runtime of an iterative function. Please help me understand the concept of asymptotic notation in a practical way. A: You should always measure time and space, not just run-time. We are all in favour of asymptotic analysis; it tells you a lot about the nature of the problem. But don't confuse run-time with measurement time.
