## Webserver Monitor Crack Full Version Free [Win/Mac]

[Download](#)

### Webserver Monitor Free Download X64

1. Attach to the logfiles (usually access\_log, error\_log, or all files) of the server(s) on which you want to monitor. 2. Analyze the logfiles in real-time to detect changes. 3. Combine the results from multiple logfiles into a single table. 4. View tables from the last hour, last day, last month, last week, or from a date/time specified with the php script. 5. View charts and diagrams from the logfiles in realtime. 6. Find out about problems with your website before your visitors do. 7. Track visitors moving around your website and see the impact of changes in configuration or content in realtime. 8. See how many unique visitors are currently browsing your website, or how many visitors are accessing a specific resource on your website, right now. 9. See a chart of the network traffic generated by visitors browsing your website in the last minutes. 10. See how often a resource was downloaded from your website. 11. Track events and scenarios of special interest with customizable counters and charts. 12. In addition to the predefined tables and charts in our free product, you can easily add your own statistics and charts to the product by using the PHP scripts. For example, you can create your own chart of the hits on your website in the last 15 minutes, hours, days, weeks or months. You can import data into Webserver Monitor in many ways, e.g. by using Apache's mod\_rewrite, phpinfo() or using a CGI script. For security reasons, a "correct" HTTP response code is sent back to the browser if the Webserver Monitor detects a connection to it that is not allowed. However, the data is only transmitted to the Webmaster in case the server responded with "200 OK". Webserver Monitor is the first fully-featured, easy-to-use webserver monitoring tool. It has been developed by an independent organization and it is only available through Google Code, the open source software development project management service. Please feel free to submit bug reports, feature requests and comments! ## Webserver Monitor Crack License Key Full [Mac/Win]

Webserver Monitor is the easiest, fastest and most reliable way to monitor your webserver. Get an overview of the server's configuration, operating state and load by simply installing a Logfeeder agent and adding an instance of Webserver Monitor to your webserver. You can then view the status of your webserver at a glance without having to do anything else. If there is a problem, Webserver Monitor will find it and provide you with a clear view of its impact. Webserver Monitor is the perfect complement to a Logfeeder agent because it shows you more information than a Logfeeder agent, but does not require you to change your current setup. Webserver Monitor comes with a large set of predefined statistics and counters, which you can customize using the intuitive graphical user interface. You can also monitor and track events and scenarios of special interest with customizable counters and charts. Follow the links above to get more information and downloads for Webserver Monitor and Logfeeder agents. Zabbix allows you to monitor \* Zabbix Service performance \* Zabbix Network performance \* Zabbix Web Server and Mail performance \* Zabbix Database performance \* Zabbix Daemons performance \* Zabbix Host performance \* Zabbix Host load \* Zabbix Checks \* Zabbix Clusters \* Zabbix Events \* Zabbix Jobs \* Zabbix Mail \* Zabbix Monitoring \* Zabbix Performance \* Zabbix Alerts \* Zabbix Anomalies \* Zabbix Hints Zabbix is an open source distributed performance management software that you can install on your Zabbix Server. It allows you to monitor the performance of a Zabbix Service (a Zabbix Host or a Zabbix Cluster), the Zabbix Network, the Web Server and the Mail server, the Zabbix Daemons, the Zabbix Database, the Zabbix Hosts, the Zabbix Clusters, the Zabbix Events, the Zabbix Jobs, the Zabbix Mail, the Zabbix Monitoring, the Zabbix Alerts and the Zabbix Anomalies. Zabbix Monitoring does not require any installation on your monitored servers. You can enable notifications and configure Zabbix Monitoring from the Web interface or using your Zabbix Server API. You can also monitor checks from the server-side using Zabbix APIs

### What's New in the Webserver Monitor?

WebServer Monitor is a real-time webserver monitoring tool for linux and windows. When you start the webserver monitor you can view your web server status in realtime, like logs and error messages. You also have the possibility to monitor your DNS by send a ping request to a specific DNS name. WebServer Monitor is a webserver monitoring tool to see in realtime how your webserver works. You can view your webserver status in realtime, like logs and error messages. You also have the possibility to monitor your DNS by send a ping request to a specific DNS name. You can select the specific areas you want to monitor, and you can define the time interval you want to see your status.
