The competition: a) No support filters: 1) Auto Filter 2) Page Request (URL query string) filters, List Lookup Filters, SQL Data Filters, BDC Business Data Filters, User Filters, Date Filters, Page Column Filters, Choice Filters, Text Filters. b) No API support: 1) No control/programmability. 2) No auto-detect filters. 3) No well documented

FilterZen [32164bit]

An SSJS macro for MS Word which contains the following 1. the entry of a searchstring to search for in a particular MS Word document. The macro can search for a string in the entire document, in a table, column, cell, paragraph, comment, drawing, image, paragraph, section, page and other parts of the document. You can use one of the formulas for conditional search: * A condition can be one of these items: + -> = or else. 2. the macro can return the location of the found string in MS Word. 3. The macro can perform a search operation on multiple strings at a time. The macro will automatically clear the searchstring after each find operation. 4. The macro can create a hyperlink to open the search results. The hyperlink can be set to open the results in MS Word or another application. The macro can use either the file name or the path to the results as the link destination. 5. The macro can show a dialog box to confirm that the user wants to use the searchresults. The macro uses an array object to store the search results. KEYMACRO Usage: The macro can be used on Microsoft Word documents. Please try the macro and let us know if it works well for you. KEYMACRO Notes: * The macro can search for a word or a sequence of words. * If the macro finds the right location of the search string, the macro will return the location of the first string in the array object. For example, if you want to search for "Microsoft Word" in a document, you can use the following macro. If you run this macro, the macro will search for "Microsoft Word" in the document and the results will be displayed in the console window. You can see that the results are: "3" : { "range" : { "start" : 10, "end" : 10, "length" : 4 }, "text" : "Microsoft" } "4" : { "range" : { "start" : 17, "end" : 23, "length" : 6 }, "text" : "Word" } "6" : { "range" : { "start" : 6, "end" : 6, "length" : 7 }, "text" : "cobweb" } "8" : { "range" : { "start" : 14, 77a5ca646e

FilterZen Download

FilterZen is the best web part for SharePoint yet. From one click to one click, FilterZen's easy-to-use web interface lets you create and deploy powerful views of your data with a single click. With complete programmability to customize your filtered views in the future, FilterZen is the fastest way to quickly and easily build and deploy views on any SharePoint data.
