Layers: Photoshop layers are workspaces to store information on an image and manipulate that information. (See the earlier sidebar "Best options for layering images.") Many of Photoshop's commands apply to layers as well as the document they're in. You can choose from several perspective, or "window," views of a layer, and move, copy, and delete layers. You can work in layers-only mode or apply many common techniques to a layer's contents. To see how layers work, refer to the sidebar "Best options for layering images." Top rows in the Toolboxes: The three rows on the top of the workspace offer the usual assortment of basic editing tools. These tools and actions are used throughout the book to add and alter images. Learn more in Chapter 8.

Choose an Edit tab: The standard set of Edit tabs always include both a History and a Levels window. When you click the History tab, the History panel opens, as shown in Figure 1-7, so that you can track changes in your image. **Figure 1-7:** The

History tab offers an array of tools that let you undo, redo, correct, and make changes to images. The Levels control is an essential tool for editing images. The tools within the Levels window control the overall exposure of images and allow you to open them up to a greater dynamic range. Bottom rows in the Toolboxes: The two rows on the bottom of the workspace contain a few of Photoshop's more specialized tools, including the Spot Healing Brush, Lasso, and Magic Wand, as well as a few others.

You may even discover a tool that's not listed here, because Photoshop has features — like vignetting — that don't fall into a category. To access more tools with a keyboard shortcut, choose Edit⇒Preferences, click the Keyboard icon, and then choose the Shortcuts tab. Help: All programs provide an onboard Help system in various forms to offer explanations and help with operations. Photoshop Help files are located online at HelpinPhotoshop.com/help.html. Use the Tools palette Photoshop's palettes serve the same function as those of other graphics programs and include a collection of tools and utilities. The top row contains many of the basic tools you need for image editing, as shown in Figure 1-8. To the left, you can see the 5x, 10x, and 25x tools in the Toolbox.

makes it a light system on a good day. Staying hydrated is important. Don't let the temperature drop below 45°F. If it is cold during the winter, bring a couple thermoses of water and plastic bottles that you can fill up and use as needed. Sometime it's good to have a couple of water bottles on hand to share. Keep them in the car and you are always prepared. Making sure your vehicle is in good working order is key to success on the trail. Your tires must be in good shape and your brakes need to work properly. Like your vehicle, everything else will follow. If you plan to go far, bring extra food and fuel. If you go overnight, bring a tent and sleeping bag for each person. If you plan on going to a campground for the night, don't forget to pack something to eat or you may find yourself on the trail searching for food after a long day of hiking. Always plan ahead of time to prevent getting lost. Know how to get home, how to find your way back to your vehicle, and where to get help in case you do get lost. Make sure to follow good hiking safety protocol. Never go hiking alone; have a cell phone or bear spray with you at all times. Make sure you know what you are doing before you go on a day hike. Be respectful. Leave your beer bottles behind. Don't litter or throw trash on the trail. Leave enough trash for others to recycle or bury. Take your trash with you and take it with you when you are done. Take time out to take in the surroundings and notice the plants, animals, and other things around you. Look for the wildlife and be respectful of nature. Hiking Gear and Gear Recommendation Do not attempt a trail you are not sure of. Some trails have hikers that stay in their car and drive in to a trailhead. A GPS can help you avoid some of these people as you hike. Make sure your hiking gear is adequate. It should be able to take a beating. You never know what you will encounter and being prepared can prevent you from becoming lost in the wilderness. Have a jacket that fits you well, one that doesn't seem to be restricting movement and isn't falling off when you move. If you plan to hike in the winter, make sure you have a hat and gloves. If you leave them in your vehicle, bring

Immunological efficacy of recombinant immunogens derived from porcine circovirus type 2. Recombinant immunogens derived from porcine circovirus type 2 (PCV2) were constructed to enhance the ability of the recombinant viruses to induce antibodies against PCV2 in swine. The recombinant viruses were generated using the pV1 recombination system under the control of a porcine teschovirus-2 (PTV2) promoter. The PCV2 DNA sequence was introduced into the vectors by homologous recombination under the control of the PTV2 promoter, thus allowing for in situ assembly of the viral genome. The recombinant viruses expressed a foreign epitope in place of the capsid protein as the main foreign antigen. By replacing the capsid with a foreign epitope, the capsid epitope would no longer be recognized by anti-capsid antibodies in pig sera. The results of neutralizing tests showed that the recombinant viruses were still attenuated with respect to PCV2 and were capable of inducing detectable level of both PCV2 specific antibodies and protective immunity against PCV2 as indicated by the neutralizing titers in serum. The levels of the neutralizing antibodies and the protective immunity against PCV2 obtained by both the rPCV2-CP and rPCV2-Cap were significantly higher than those obtained by the wild-type PCV2. Thus, the rPCV2-CP and rPCV2-Cap were more effective in inducing immune responses compared to the wild-type PCV2. In addition, the study with the recombinant virus rPCV2-p28 revealed that the presence of more than one foreign epitope was critical for inducing protective immunity against PCV2. The present invention relates to die cutting machines, and more particularly to a die for a die cutting machine such as is used in the manufacturing of phonograph records, tapes, compact discs, and like products, and to a die cutting machine incorporating same. In the manufacture of phonograph records, of tapes, compact discs and the like, it is known to use a die pressing machine to shear a piece of plastic material which serves as the recording medium to the desired size, then to transport the cut piece along the piece to a further processing station where the piece is released from the die pressing machine and is cut into a shape which may be transferred to the piece to give a desired shape to the compact disc. A typical die
